

ANEVIA LAUNCHES FLAMINGO 3.9 A NEW MODULAR ALL-IN-ONE HEAD-END

Anevia, leading OTT and IPTV software vendor providing innovative solutions for TV and Video delivery including live, near-live, on-demand and multiscreen unveils the new version of its Flamingo head-end, a fully integrated, all-in-one multiscreen solution.

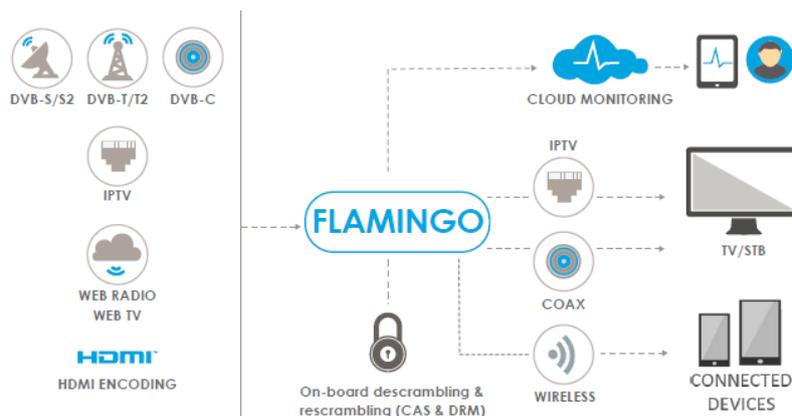

Content on any device and any network

The Flamingo 3.9 head-end captures TV and radio signals from various sources such as satellite, DTT, cable, fiber and HDMI, and streams content to any connected device (TV, computer, tablet, smartphone...) within a building or a network of buildings (hotels, hospitals, stadiums...). The solution offers integrated recording and storage capabilities, enabling new services such as Pause TV, Restart or Catch-up, and supports up to 10 Standard Definition channels per card on the same server.

"This new version of Flamingo is the result of months of research and development in co-creation with our customers and partners. It also illustrates Anevia's ambition to be at the forefront of technology and new consumer habits of television," **says Damien Lucas, Anevia's CTO.**

The new Flamingo allows viewers to watch live and time-shifted TV, on any device and through any network (IPTV, COAX or WiFi). And since the transcoding module uses Adaptive Bitrate (ABR), video is delivered in the highest quality to any mobile device. Flamingo also decrypts and encrypts streams with integrated DRM and CAS solutions to guarantee the security of premium content.

Integrated multiscreen features and even more cost-effective TV services

Since Flamingo 3.9 is the only head-end in the market to integrate all of these time-shift and multiscreen functions within one appliance, hardware requirements are reduced and installations made much easier. So customers quickly see a larger return on their investment.
