Anevia Launches World's First Cloud-Native CDN Solution

Anevia, a leading provider of OTT and IPTV software solutions, has announced that it is launching the world's first cloud-native content delivery network (CDN) solution which will enable operators to easily deploy their own CDN while using its capacity to deliver high-quality services, even during peak traffic.

The new architecture for Anevia's next-generation CDN product, NEA-CDN 5.0, is now based on cloud-native technologies to allow operators to run a CDN on premise or on public or private cloud, as well as on edge-based resources or data centre-based resources, to be completely compatible with hybrid infrastructures.

With operators generally only using 6% of their available CDN capacity, 94% of the capacity goes to waste as it is only used during peak traffic times. As the first CDN based on the Kubernetes infrastructure, the NEA-CDN 5.0 range enables operators to cut this waste, while still meeting peak traffic requirements, by allowing operators to scale their infrastructure up or down instantly as demand changes. At a time when operators are increasingly wanting to deploy their own CDNs, this will also allow greater control over their operational cost as well as the quality of the delivery.

To ensure viewers get the best possible experience, Anevia's new solution enables operators to deploy all the next-generation services they need, such as live, time-shift, VOD, 4K and Ultra-Low Latency.

Additionally, centralised management and an analytics platform make NEA-CDN 5.0 easy to operate.

David Tencer, Product Owner, NEA-CDN, Anevia commented: "Our customers have expressed a strong need for a flexible infrastructure that enables them to scale up and down as traffic demands fluctuate. We have integrated bleeding-edge, future-proof technologies, such as Kubernetes, to create a long-awaited solution that meets this need."

About Anevia

Anevia is a leading OTT and IPTV software provider of innovative multiscreen solutions for the delivery of live TV, streaming video, time-shifted TV and video on demand services. The company offers a comprehensive portfolio of video compression, multiscreen IPTV head-ends, Cloud DVR and CDN solutions to enable viewers to enjoy a next-generation TV experience – anywhere, anytime and on any screen - including 4K UHD content. The solutions have been widely adopted by globally-renowned telecom and pay-TV operators, TV broadcasters and video service providers in hospitality, healthcare and corporate businesses.

Founded in 2003, Anevia has a track record of being first to market with advanced video technologies. The company is a member and active contributor to several TV, media and

hospitality industry associations. Headquartered in France, with regional offices in the USA, Dubai and Singapore, Anevia is listed on the Paris Euronext Growth market.
