

Anevia Announces the Launch of Genova Station – A Feature-Rich, Ready-To-Use Encoder

Anevia, a leading provider of OTT and IPTV software solutions, has today announced the launch of Genova Station, an off-the-shelf, small form factor encoder. Leveraging the company's award-winning encoder technology, the compact, hardware accelerated Genova Station appliance delivers enterprise-level video streaming functionality in a "plug and play" format at a highly aggressive price point.

An ideal solution for smaller media companies and corporates that want to stream high-quality video content on any device without investing in developing in-house the technical skills needed to install and configure today's sophisticated software encoders, Genova Station has all that is required already pre-installed, integrated and ready to go in a single box, based on a reliable standard hardware server.

The first best-of-breed encoder available as an off-the-shelf product, Genova Station offers the same high quality, low latency video functionality as the traditional Genova encoders that are widely used by tier-1 operators, including optional support for SDI entries.

Available for immediate shipping, Genova Station has been extensively bench- and field-tested to guarantee its performance and offer a risk-free, entry-level investment for organisations wishing to adopt the latest OTT and streaming services to enhance their business operations.

Jérôme Blanc, Anevia's EVP Compression Products, commented: "We believe that Genova Station represents a major opportunity to open up the best of the video-streaming marketplace to a wider range of organisations. By removing the technical challenges and cost concerns attached to traditional tier-1 encoder software, it means that any company that wishes to take advantage of the latest and best video-streaming technology now has an affordable and flexible solution without losing any of the top-tier features."
